

DCS-OPCT evidence chain and information-access boundaries

STAGE I Mechanism

Source predictions + labels
Counterfactual identity dose
Matched training; fixed test rows
Configuration endpoint

STAGE II Risk

Source configuration labels
Five mechanism predictors
Frozen L2-logistic probability
Output: audit-risk ranking

STAGE III Release

Unlabeled target geometry
CORAL + quantile candidate
Limited-label Brier certificate
Release or return original

PRIMARY ANALYSIS

transductive, outcome-held-out

Full target unlabeled batch

Audit + held-out covariates enter
transform fitting and assignment.

Audit partition

Audit covariates fit transforms.
Audit labels certify release.

Outcome-held-out partition

Outcomes hidden until final
evaluation. Covariates are not unseen.

STRICTER SENSITIVITY

configuration-level inductive

Seed-only assignment

Stratum + ordered seed IDs only.
No target feature or outcome.

Audit-side fitting

Audit covariates fit transforms/gates.
Audit labels certify release.

Covariate/outcome-unseen

Frozen action applied once.
Raw-group reuse can remain.
